

Exercises: Joining tables

Use webshop.db for all exercises. Before you start, check that the orders are there: `SELECT COUNT(*) FROM orders;` should give 15. If not, run `webshop_reset.sql` and press Ctrl+S.

Exercise 1

Show every order with the customer's first name, last name and the order status.

Expected: 15 rows

Exercise 2

Show all orders made by Erik.

Expected: 3 rows

Exercise 3

Show all orders from customers in Göteborg, newest first.

Expected: 3 rows

Exercise 4

Show every order item with the product name and category.

Expected: 23 rows

Exercise 5

Which orders contained Shoes? Show `order_id` and product name.

Expected: 4 rows

Exercise 6

Show the full receipt for order 10: product name, quantity, unit price and line total.

Expected: 2 rows

Exercise 7

Show which customers have bought a Hoodie Black (first name and order date).

Expected: 3 rows

Exercise 8

Show all customers and their orders, including customers with no orders.

Expected: 17 rows

Exercise 9

Which products have never been sold?

Expected: 2 rows

Exercise 10

Challenge: show customers from Uppsala and every product they bought (first name, product name, quantity).

Expected: 8 rows
