

Install DB Browser for SQLite

1. Go to sqlitebrowser.org/dl

- **Windows:** “DB Browser for SQLite – Standard installer for 64-bit Windows”. Open the file and click Next until it's done. If the computer says you need admin rights, download the **PortableApp** version on the same page instead. It works without installing.
- **Mac:** download the **.dmg** file, open it, and drag DB Browser for SQLite into the Applications folder. The first time you start it, **right-click the app and choose Open**, then click Open again. A normal double-click gets blocked by macOS the first time.
- **Linux:** open a terminal and type `sudo apt install sqlitebrowser`.

3. Start the program. On Windows it's in the Start menu as “DB Browser (SQLite)”.

Open webshop.db

- 1 **Save the file first.** Download `webshop.db` from where it was shared (Teams → Database channel) and save it in a folder you can find again, for example Documents/SQL. If it comes in a zip file, unzip it first.
- 2 In DB Browser, click **Open Database** in the toolbar at the top (or press `Ctrl+O`, Mac: `Cmd+O`).
- 3 Find `webshop.db`, select it and click **Open**.
- 4 Check that it worked: click the **Database Structure** tab. You should see **Tables (2)** with customers and products.
- 5 Go to the **Execute SQL** tab to write your queries.

Next time: the file is in **File** → **Recent Files**, so you don't have to search for it again.

If something goes wrong

- **You see no tables:** you probably opened the zip file or another file. Open the real `webshop.db` again.
- **Changes are gone when you reopen the file:** you forgot to save the data. Press `Ctrl+S` (Write Changes) after you change data.

LAB1

- 1 Show the first name and email of all customers. *(10 rows)*
- 2 Show all products in the Shoes category. *(3 rows)*
- 3 Which customers live in Uppsala? *(3 rows)*
- 4 Which product costs exactly 199 kr? *(1 row)*
- 5 Show all products sorted by name, A to Z. *(12 rows)*
- 6 Show all customers, the one who joined first at the top. *(10 rows)*
- 7 Which products are sold out (stock is 0)? *(2 rows)*
- 8 Show the 3 newest customers. *(3 rows)*
- 9 Show customers from Stockholm or Göteborg. Use IN. *(4 rows)*

10 Show product name and price, but call the columns product and price_sek. (12 rows)

Bonus questions

- 1 Show products that are Clothing or Shoes **and** cost more than 1000 kr. Hint: you need brackets. Try without them too: why is the answer different? (3 rows)
- 2 For every product in stock, show name, price, stock and the total value of the stock (price × stock) as stock_value. Highest value first. (10 rows)
- 3 Which customers have a first name with exactly 4 letters? Hint: _ in LIKE means “exactly one character”. (4 rows)
- 4 Sort the products by price, cheapest first, and show only products number 6 to 10. Hint: look up OFFSET. (5 rows)
- 5 Show customers who joined before 2025 and don't live in Uppsala. Sort by city, and by last name within the same city. (4 rows)
